

The Triangle

MAY 1978

The Triangle

Editor,
Rudolph Kneer

ON THE COVER . . .

Whoever said there's no money in ideas? Here's proof positive that Inco's Employee Suggestion Plan pays off handsomely for the right ideas! Albert Klussman, left, and Al Kaven, right, drill fitters at the Froid-Stobie complex, recently collected \$4,675 each for their suggestion to redesign centralizers on underground drill jumbos. Fern Roberts, centre, superintendent of maintenance, Froid-Stobie complex, was on hand to help Albert and Al count their award money.

With a maximum award of \$10,000 now payable under the Ontario Division's Employee Suggestion Plan, why not cash in on your ideas? Purpose of the plan is to encourage employees to put forward original ideas to improve safety and production in the Division's mining, processing and maintenance operations.

May 1978

Volume 38, No. 5

Published for employees of the Ontario Division of Inco Metals Company, Copper Cliff, Ontario, P0M 1N0. Phone 682-0631.

John A. Graham, left, of Omeme, Ontario, former general manager, Ontario Mines, Noranda Mines Limited, recently received the Inco platinum medal for 1978 from John McCreedy, chairman and chief executive officer of Inco Metals Company, during the 80th annual general meeting of the Canadian Institute of Mining at the Hotel Vancouver, Vancouver, April 23-26. The medal, donated by Inco, is presented annually by the CIM as a mark of distinction and recognition to the person who has made a meritorious and practical contribution of outstanding importance to the mining and metallurgical industry of Canada. The CIM's citation accompanying the award follows: "In recognition of his long and meritorious service to the Canadian mineral industry, exemplified by his development and successful exploitation of the Geco orebody."

Inco Metals Company Forms A Technical Services Division

Inco Tech has been organized as a division of Inco Metals Company to develop a worldwide consulting service — on a contractual basis — to a variety of organizations in the mining and minerals industries. The announcement was made recently by John McCreedy, chairman and chief executive officer of Inco Metals.

Ron Taylor

Drawing on specialists throughout the Inco organization, Inco Tech will provide a wide range of services in practically all branches of the minerals development field.

Inco Tech's services will include fundamental research; geological assessment and exploration methodology; and technological and engineering direction as it applies to exploration, mining, production, processing and refining of all types of ores and minerals. Inco Tech will also manage licensing of Inco's proprietary process technology in the minerals field.

Canadian enterprises are expected to be

among major customers for the division's services. Inco Tech's headquarters are at 1 First Canadian Place, Toronto.

Inco Tech will be directed by Ronald R. Taylor, who was named president of the division. Mr. Taylor has been president of the Ontario Division of Inco Metals Company since 1973.

"In launching Inco Tech," Mr. Taylor said, "Inco recognizes the progress and changes that have taken place in minerals development throughout the world. By sharing and broadening the expertise Inco has accumulated for more than 50 years and in serving the world minerals industry in this way, the company foresees mutual benefits to Inco and to Canada."

"One of the major rewards from the activities of Inco Tech," Mr. Taylor added, "will accrue to the experienced specialists in the Inco organization. They will have the opportunity to broaden the application of their skills and to further develop professionally."

Inco Tech will draw its technological expertise primarily from Inco's regular professional staff in the exploration, mining, resource development, process development and engineering groups. The facilities of Inco Metals' major Ontario research and development centres at Sheridan Park, Port Colborne, and Sudbury will be made available to clients.

Ontario Division Managers Bid Hearty Farewell To Ron Taylor And Charlie Hews

Ontario Division managers and their wives gathered recently at the Inco Club in Copper Cliff to bid a fond farewell to Ron and Vi Taylor and Charlie and Biddie Hews.

Ron Taylor, formerly president, Ontario Division, Inco Metals Company, has recently taken over his new duties as president, Inco Tech, and as assistant to the president, Inco Metals Company. He will be located in Toronto.

Charlie Hews, newly-appointed president of the Manitoba Division, Inco Metals Company, was formerly the Ontario Division vice-president, responsible for administration and engineering services. He will be located in Thompson, Manitoba.

Master of ceremonies, Mel Young, assistant to the president, Ontario Division, told the large gathering that he was sad to see men of their calibre leave the Ontario Division. "You'll be sadly

missed," he said. "However, along with all others here tonight, I wish you much success in your new assignments."

Following a delicious dinner, Gordon Machum, Ontario Division vice-president, responsible for smelting and refining, on behalf of the gathering presented Mrs. Taylor and Mrs. Hews with Royal Doulton figurines. Mr. Taylor and Mr. Hews were each given a set of bookends, expertly polished from Inco ore.

Gordon Machum, left, Ontario Division vice-president, in conversation with Vi and Ron Taylor, following the presentation ceremony.

Joe Church, right, regional manager, field exploration — Canada, shares a humorous story with Charlie and Biddie Hews.

Posing for The Triangle photographer are, from left, Charlie and Biddie Hews, Dr. John Jones and his wife, Gina, Marie Young, and Ron and Vi Taylor.

Here is the Fern Deschamp family. Fern, a 2nd class plantfitter at the Port Colborne nickel refinery, enjoys bowling, camping and redecorating his home in his spare time. With his wife, Nicole, are their children Lorraine, 10, Normand, 8, and Ronald, 1.

John Crepeau, an Incoite for over 30 years, is a construction leader at Creighton No. 9 shaft. In his spare time he enjoys hunting and fishing, and he has a Jeep for this purpose. With his wife, Cecile, are children Robert, 11, Carol, 19, and Danny, 14.

Bob Vendermin has been with Inco for the past 22 years and is presently a 2nd class mechanic with the maintenance field force in Copper Cliff. An avid hunter, Bob also enjoys gardening in his spare time. That's his wife, Armande, and children Peter, 16, and Lisa, 13.

Family Album

This is the Roland Pellerin family. Roland is a diamond driller at Froid mine and, along with his family, enjoys his camp on Nipissing Lake during the summer and winter months. With his wife, Armande, are children Chantal, 14, Michael, 17, Claude, 15, Lucie, 13, and Guy, 10.

Joseph Buturajac is a section man at the Copper Cliff copper refinery, and fellow workers praise his ability to make an excellent homemade wine. Aside from his talents in the grapes department, Joseph enjoys hunting and fishing in his spare time. That's his wife, Jelka, daughter Renata, 8, and son Joseph, 5.

This is the Leonardo Dhinell family. Len is a driller at Stobie mine and has been with Inco for the past 13 years. Along with his family, he enjoys camping in his house trailer during the summer months. With his wife, Claudette, are sons Roger, 13, Richard, 15, and Paul, 11.

Nickel Inventory Still Abnormally High:

Favorable Currency Translation Adjustments Contributed To Higher 1st Quarter Earnings

Shareholders were told at the recent annual meeting that earnings of Inco Limited for the first quarter of 1978 were \$34.9 million, compared with \$41 million for the first quarter of last year and \$4.6 million for the fourth quarter of 1977. Earnings per common share for these periods were 40 cents, 55 cents and two cents a share, respectively, after allowing for preferred dividends of \$4.8 million in the first quarter of 1978 and \$3.0 million in the fourth quarter of 1977. No preferred shares were outstanding during the first quarter of 1977.

Net sales for the first quarter were \$517 million, compared with \$451 million for the first quarter of 1977 and \$534 million for the fourth quarter of 1977. Sales by ESB Ray-O-Vac were \$185 million for the first quarter of 1978, \$154 million for the first quarter of 1977 and \$212 million for the fourth quarter of 1977; such sales represented 36 per cent, 34 per cent and 40 per cent, respectively, of total sales.

The decrease in earnings for the first quarter of 1978, as compared with the corresponding quarter of last year, was due principally to lower prices for primary nickel and copper and reduced benefit from favorable currency translation adjustments, partially offset by higher deliveries of primary nickel. Currency translation adjustments increased earnings by \$10.9 million, or 15 cents a share, in the first quarter of 1978 as compared to \$16.4 million, or 22 cents a share, in the first quarter of 1977.

The substantial improvement in earnings in the first quarter of 1978 over the fourth quarter of 1977 resulted mainly from higher primary nickel deliveries and favorable currency translation adjustments of \$10.9 million as compared with unfavorable currency translation adjustments of \$0.8 million in the fourth quarter. In addition, the fourth-quarter 1977 results included an \$18.5 million provision for separation costs and plant closing expenses.

First-quarter deliveries of nickel in all forms amounted to 92 million pounds, compared with 73 million pounds in the first quarter of 1977 and 79 million pounds in the fourth quarter of 1977. The first-quarter deliveries of nickel benefitted by some 10 million pounds due to advance buying, including purchases by customers worldwide in anticipation of a price increase and, to a lesser extent, purchases due to stepped-up consumption by customers in the United States who anticipated power cutbacks as a result of a coal strike. At March 31, 1978,

the Company's finished nickel inventory totalled 341 million pounds, unchanged from the abnormally high year-end 1977 level. Copper deliveries totalled 77 million pounds, compared with 82 million pounds in the first quarter of 1977 and 96 million pounds in the fourth quarter of 1977.

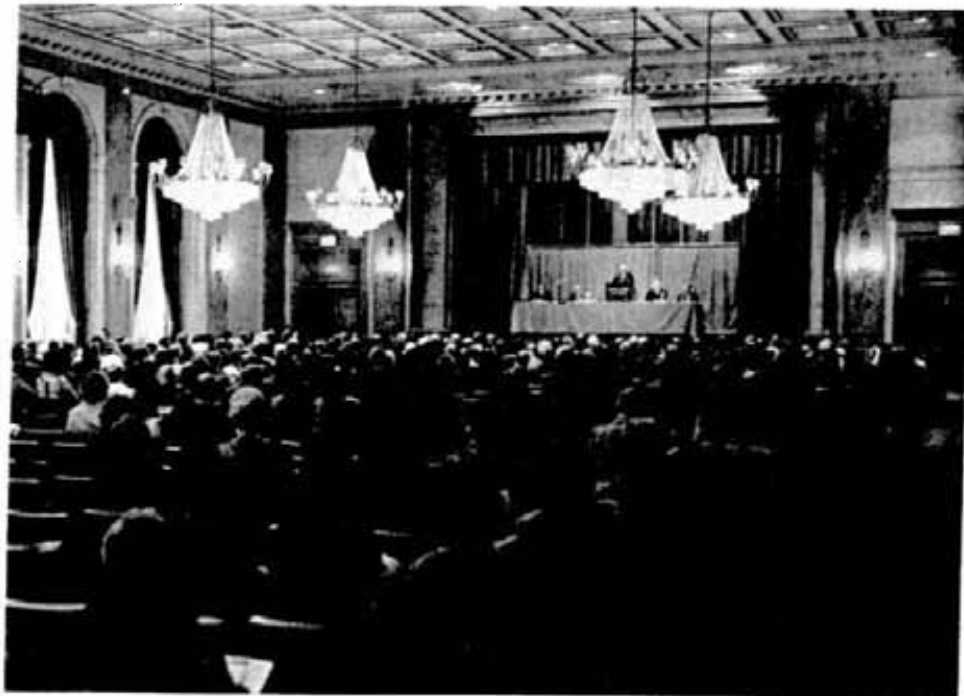

The first quarter's results were not affected by the Guatemalan and Indonesian projects since all costs of the projects continued to be capitalized. However, with the completion of construction and expected successful pre-operational testing of the project facilities in Guatemala and Stage I in Indonesia, interest on related borrowings will be charged directly to consolidated earnings commencing in the second quarter. Additionally, Stage I of the Indonesian project is presently expected to attain commercial production levels

within the next few months. Subsequently, as this production is sold to customers as matte or as refined nickel after further processing, earnings will reflect such sales and related costs. Losses from these sales are expected in the initial periods after the start of commercial production whenever production volumes are substantially below capacity. It is not expected that the Guatemalan project will attain commercial production levels in 1978.

The board of directors on April 18 declared a quarterly dividend of 20 cents (U.S.) a common share, payable June 1 to Class A and Class B shareholders of record on May 3. The dividend on the Class B Common Shares was declared payable out of "1971 capital surplus on hand" as defined in the Income Tax Act of Canada. The board of directors also declared a quarterly dividend at an annual rate of 5.375 per cent on the company's series A Preferred Shares, payable on June 1 to shareholders of record on May 18, and a quarterly dividend on the company's 7.85 per cent Series B Preferred Shares, payable June 1 to shareholders of record on May 3. Series B Preferred shareholders may elect to receive, in lieu of a cash dividend, a stock dividend in the form of either Series B Preferred Shares or Class B Common Shares.

Note: All dollar figures expressed in U.S. currency.

A large crowd turned out for the Company's annual meeting of shareholders, held April 19 at the Royal York Hotel in Toronto. Chairman and Chief Executive Officer J. Edwin Carter cautioned those present that the first-quarter financial results, even though favorable compared with the last quarter of 1977, should not be considered as indicative of earnings over the balance of the year.

Thirteen-year-old Kenny Winkelmann, left, of Churchill Public School, shows off his "ME-2" robot to Carol Landolt, of McLeod Public School, and Charles Kettle, of Churchill Public School. Needless to say, his exhibit drew a large crowd.

Jennifer Young, left, and Robert Niebor, listen as Karen Shook, age 15, of Confederation High School, explains her winning exhibit "Single Cell Protein". Karen's dad is employed at Little Stobie mine.

"Household Insulation" was exhibited by Doug Nadorozny, right, a LaSalle Secondary School student, whose dad is at Garson mine.

10th Regional Science Fair:

Students of Today, Scientists of Tomorrow

Sudbury's young scientists had an opportunity to "show their stuff" during the 10th regional Science Fair, held recently at Sudbury Secondary School. Close to 100 exhibits were entered in the three categories of life, physical, and engineering sciences, with judges also evaluating according to junior, intermediate, and senior categories.

Walking away with top honours were Michael Farkouh of St. Charles College, for "Revegetation — Soil Phosphorus in Barren Land Reclamation; Karen Shook of Confederation Secondary School, for her "Single Cell Protein: Microbial Synthesis — Paraffins"; Denis Rochon

Exhibition theme was "The Voltaic Cell" for Andrew Belyea, left, a 15-year-old student at Nickel District Secondary School. Listening to Andrew's description is Jim Hicks, one of the Science Fair judges.

Mario Peloso and his wife enjoy a briefing on "Drag Constant" by 14-year-old exhibitor Alan Laing, a Lockerby Composite School student, whose dad, Ian, is an Inco metallurgist in Copper Cliff.

Twelve-year-old Darren Nadorozny of Carl A. Nesbitt Public School, whose dad is a maintenance controller at Garson mine, adjusts his exhibit, "The Effect of Cold on Batteries", while judge Dr. Janice McKenney looks on.

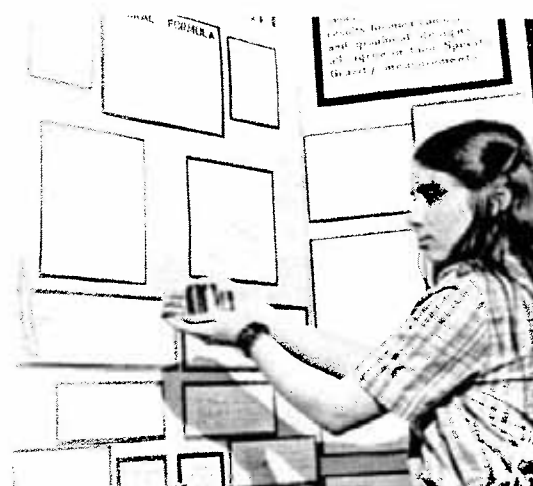

"Effects of Human Beverages on Plants" was the presentation of 13-year-old Todd Kurchina, right, of MacLeod Public School. Interested spectator is Brenda Zwarich, a student at Nickel District Secondary School.

and Marc Legault of MacDonald-Cartier Secondary School, for "Origin of Life" and Gilles Boisvert, of Hanmer Secondary School, for his "Une micro-balance a couteaux".

The four winners go on to participate in the 17th annual Canada-Wide Science Fair being held in Sudbury May 7 to 13, with prizes including cash and scientific excursions. It's anticipated that over 150 exhibits will be entered, and that the event will draw more than 1,000 people to Sudbury, including entrants, teachers, speakers and judges. Tours of Inco's surface facilities are now being arranged to accommodate the influx of visitors.

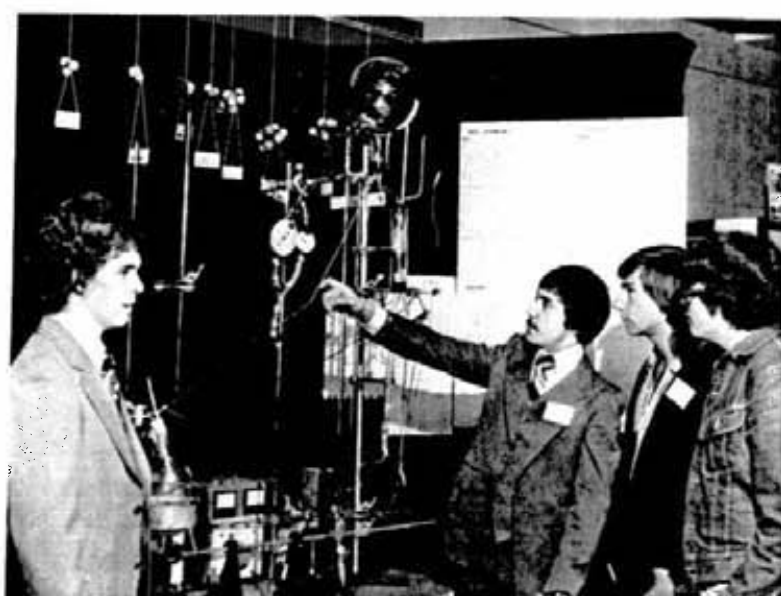

From St. Charles College, Peter Tolvaia, right, demonstrates his "Iridology" exhibit to science teacher Diane Abols. Peter's dad, Stanley, works at the Froid-Stobie complex.

Holding metal and paraffin samples to demonstrate her "Volume — Weight" exhibition is 14-year-old Phyllis Belyea, a student at Nickel District Secondary School.

Brian Scott, left, publicity director for the Canada-Wide Science Fair, watches while Tim Taschereau and Tim Rochon, of Pius XII, work their "Electric Generator" exhibit. Tim Rochon's dad, Lionel, is with Inco's Safety and Plant Protection department.

Denis Rochon and Marc Legault, left, both 18-year-old MacDonald-Cartier Secondary School students, explain their exhibit, "Origin of Life", to Boris Nanef and Joe Swanson, students at St. Charles College.

A crane inspector in the converter department at the Copper Cliff smelter, Primo Facca plans to fish for Atlantic salmon and visit relatives in New Brunswick.

Gerry Rancourt, first-class maintenance mechanic with matte processing, will visit relatives in Quebec, then spend two weeks camping on Manitoulin Island.

A month of fishing at Gaspé Bay is the holiday plan for Gordon Hayes, a reverberatory furnace helper at the Copper Cliff smelter. Gord's been with Inco for 10 years.

Don Richer, a plateworker in the Copper Cliff plate shop, intends to spend his vacation working around the house and perhaps taking in some camping and fishing.

The Triangle asks:

... What are you planning

A loader in the shipping department at matte processing, Robert Morris has been with the company for seven years, and simply plans to relax at home and enjoy his family.

A flue cleaner in the furnace department at the Copper Cliff smelter, Brian Boulrice will head for Manitoulin Island, then on to Sault Ste. Marie with his family.

Fishing and fixing up the camp are the first priority on the holiday agenda for Larry Chubay, an instrumentationman in the electrical shop at the Copper Cliff smelter.

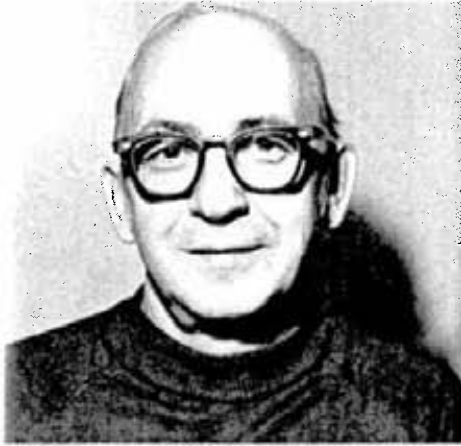

Ossie Parker, a second-class fitter with the reverberatory section of the Copper Cliff smelter, has been with Inco for 26 years and will spend his vacation at his camp at Onaping.

Theron Fraser, an assistant operator in the casting and cooling building in Copper Cliff, plans to fish around Kirkland Lake and visit Toronto.

An assistant operator in the casting and cooling building in Copper Cliff, Isaac Rismond will enjoy three weeks in London, England, then two weeks in Toronto.

A skimmer in the converter department at the Copper Cliff smelter, Clayton Smeltzer, a 25-year-old man, will be fishing for salmon in Greenfield, Nova Scotia.

A homemade motorhome van will take Angelo Colosimo to Thunder Bay and Niagara Falls for three weeks. Angelo's a feedtender in the roaster section of the Copper Cliff smelter.

It's going to be a nice 'n' easy holiday for Jim Nadeau, pitman operator with transportation and traffic. Jim plans to stay home, work around the house, and just relax.

A repairman at the Copper Cliff car shop, Valentino Bertulli will visit relatives in Italy for four weeks, then plans to putter around the garden at home.

for your summer vacation?

A skimmer in the converter department at the Copper Cliff smelter, Art Fairburn plans to holiday in New Brunswick, then camp at West Bay near Wahnapiatae Lake.

A process laborer in the furnace department at the Copper Cliff smelter, Doug Young will spend two weeks in Nova Scotia; he will camp for the rest of his vacation.

Alfred Deluca, reverb furnace operator at the Copper Cliff smelter, will visit relatives in New York State for a week, then will be home gardening and barbecuing.

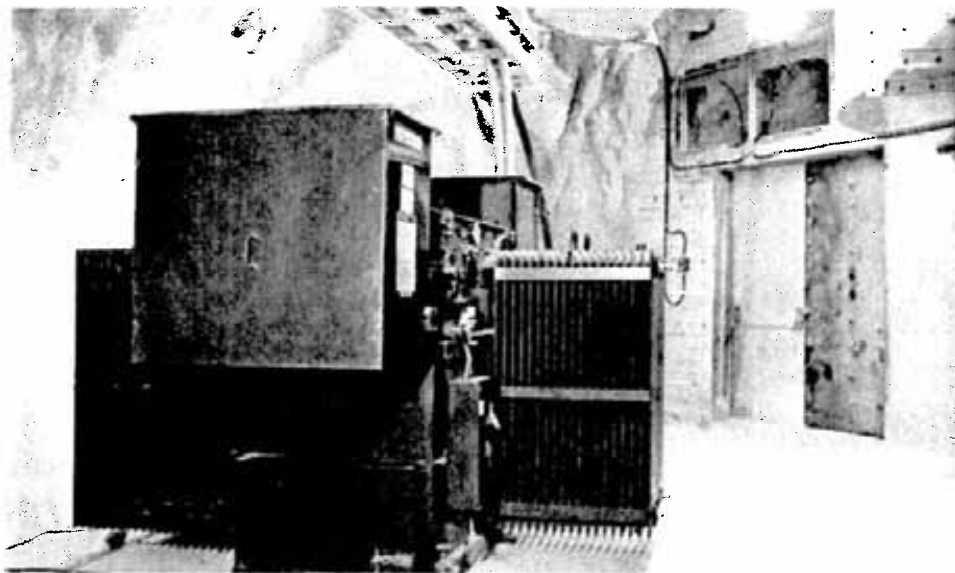

For Quinn Sylvtri, a dryman at the No. 3 dry, Copper Cliff smelter, it'll be three weeks in Pennsylvania and two weeks in Ohio. Quinn's been with the company for 27 years.

Dale Peloquin, a burner at Creighton No. 9 shaft, is looking forward to six weeks spent touring on his motorcycle. He's also planning some camping and fishing.

A first-class patternmaker in the Copper Cliff carpenter shop, Allan Wuorinen will be taking the family to Northern Manitoba, then will tour Northern Ontario.

First of its kind to be introduced to Inco's underground operation –

"Halon" is key to new Fire Suppression System

In the transformer vault at Stobie mine's 3900 level, two oil-filled 2500KVA transformers and a dry-type 750KVA ancillary transformer are protected by the new Halon fire suppression system.

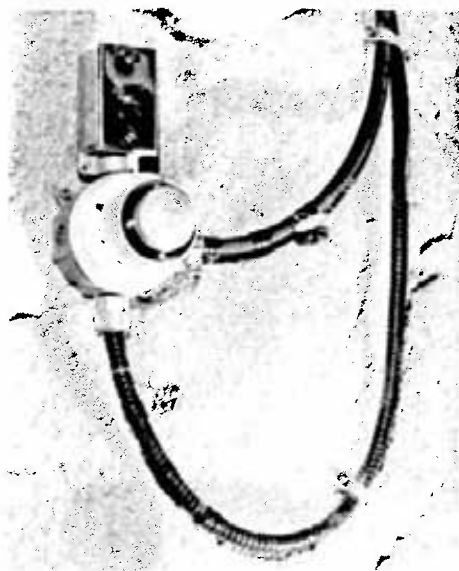

In the switchroom adjacent to the vault, Charlie Pitts, left, Stobie mine planning engineer, and Yvan Chaumont, Stobie mine maintenance planner, verify that the Halon cylinder is properly charged.

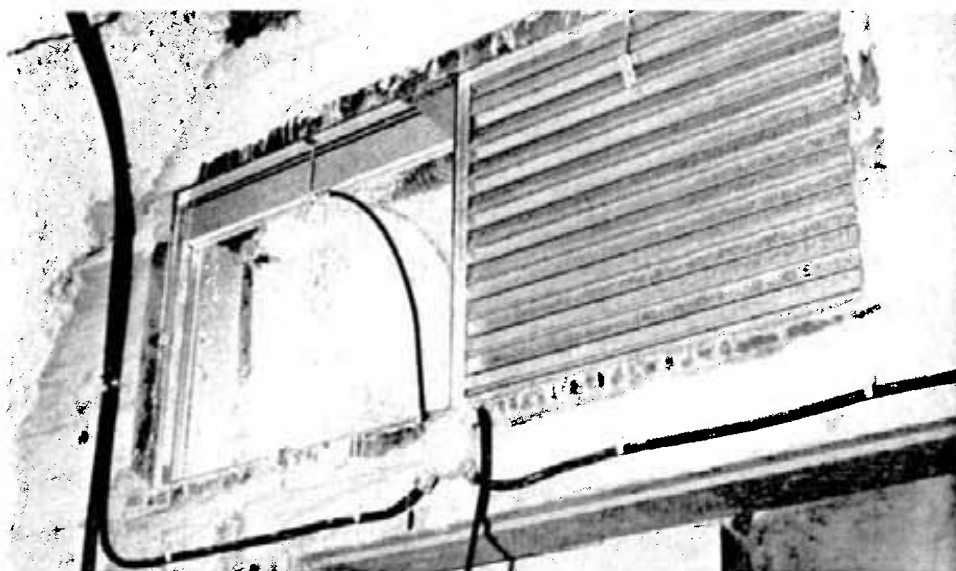

In order to mine a lower orebody, the Stobie mine shaft has been deepened to 4,000 feet, creating the need for an additional power supply. In turn, the type of equipment required to handle the extra power facilities called for a highly sophisticated fire suppression system.

Working with the Stobie mine engineering department, Inco's general engineering section drew up plans and submitted them to the Ontario Ministry of Labor for approval. The system was recently installed at Stobie's 3900 level and has now been tested, witnessed, and approved by the Ministry. On hand for the testing was George McAllister, assistant superintendent, maintenance, Frood-Stobie complex, who stated that "the test was impressive."

Known as the "Halon Fire Suppression System", the new method is the first such application underground in the Sudbury district. In the particular case of Stobie, a Halon cylinder has been charged with 206 pounds of harmless Halon 1301 gas, at 350 pounds per square inch, previously determined as the combination required to fill the cubic capacity of the 3900 level transformer vault, which houses two oil-filled 2500KVA transformers and a dry-type 750KVA ancillary transformer. A thermal sensor has been installed above each of the two oil-filled transformers, a discharge nozzle is centred overhead, and two ventilation louvres, or dampers, will automatically seal off the room when activated.

A special thermal sensor has been positioned above each of the two oil-filled transformers.

Two fireproof dampers ventilate the vault. The damper at left is in the normal open position, while the damper at right demonstrates the closed position, resulting from the first sensor being activated.

In practise, the system is relatively simple: when a rise in temperature occurs to 135°F or 57°C, the two-zone alarm system is triggered. The first heat sensor, when activated, sounds a fire alarm and simultaneously melts a fusible link which,

in turn, immediately lowers the two dampers, thus completely sealing off the vault. When the second sensor is activated, the Halon gas is released, filling the vault in approximately seven seconds and extinguishing a fire in seven

to 10 seconds.

Fern Roberts, superintendent, maintenance, Froid-Stobie complex, indicated that "It's a system that will certainly be considered in future installations."

Centrally located overhead, this discharge nozzle, when activated, emits the Halon gas.

Inspecting one of the two manual "pulls" that will also activate the new fire suppression system are Ken Stone, left, Froid-Stobie safety supervisor, and Michael Reiser, electrical mechanical engineer, Ministry of Labor.

Electrical foreman Art Robinson, left, explains the operation of the Garson mine number two deep-well pump and motors to first class electrician Cleo Roy.

Because of the extreme importance of a continuous fresh water supply for surface and underground mining operations, proper maintenance and a backup power supply are an absolute must for the pumps that provide the water.

The Garson mine number two deep-well pump and motors are inspected weekly, to ensure proper operation. The 100-horsepower electric pump motor will supply up to 750 gallons per minute upon demand and, should requirements increase, a diesel pump motor will automatically cut in, providing up to 1,000 gallons per minute.

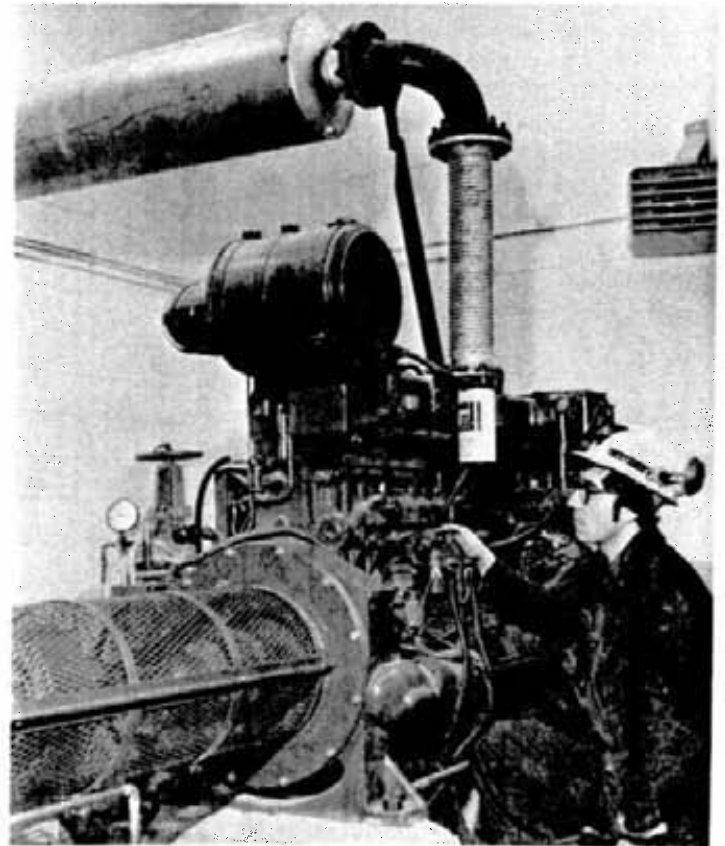

The pump is set up so that, should a power failure occur, the diesel engine will start automatically. Then, when power is restored, the electric motor will automatically take over after a 20-minute delay. The changeover from electric to diesel power is accomplished by operating control switches at the pump-house, or by using remote operation switches located in the operating shaft boss office.

Thus, at all times, our pumps have "power to spare"!

Keep on Pumpin'!

The pumps and motors that provide fresh water to the mine's underground and surface operations are inspected weekly to ensure continuous operation.

Cleo Roy demonstrates the manual starting procedure of a backup diesel engine which automatically cuts in in the event of an electric power failure.

Underground mining operations require large volumes of compressed air to power everything from high-volume drilling equipment right down to simple air-operated stope lights. For example, Levack and Levack West mines produce in excess of 12 billion cubic feet of compressed air in a year, representing a cost of approximately half a million dollars.

As part of Inco's ongoing energy management program, the Levack energy committee asked for help from the central utilities and industrial engineering departments to evaluate the efficiency of Levack's compressed air system.

The first part of the study involved continuous monitoring, to determine the air distribution to various parts of the two mines. Air requirements were calculated and, by comparing the requirements with the actual monitored flow volumes, the levels of efficiency of compressed air usage were derived at.

Initial results indicated that compressed air use during production shifts was relatively efficient; therefore, the non-productive shifts offered the most potential for reducing consumption. Certain main valves were closed, and compressed air production was cut back to approximately 75 per cent of previous volumes, thus conserving 4½ million kilowatt-hours of electric power annually, meaning a saving of \$75,000 on the electricity bill.

Studies continue to further reduce levels of air consumption at Levack and, according to Gerry Cullain, manager of central utilities, it's anticipated that the program will be carried out in other Sudbury operations to maximize the efficiency of compressed air use.

In the Levack compressor building services tunnel, a flow recorder is examined to determine output of the compressors. Checking the recorder are, from left, Lew Butler, supervisor of utilities for the Levack complex, Eero Mansikka, senior surveyor with central utilities, and, kneeling, Allan Uildersma, hydraulics technician, central utilities department.

Compressed Air Study

"Minimize consumption to maximize efficiency" is part of Inco Metals Company's ongoing energy management program

Measuring air temperatures in the compressed air supply lines at the 1600 level of Levack mine are, from left, Andy McLean, maintenance controller and chairman of the Levack complex energy committee, Allan Uildersma, hydraulics technician with central utilities, and Eero Mansikka, senior surveyor, central utilities department.

Inspecting the final results of the air measurement survey are, from left, Claude Kerr, senior field engineer; Bob Todd, industrial evaluator; Gerry Cullain, manager, utilities; Allan Uildersma, hydraulics technician, and Berno Wenzl, energy management co-ordinator.

Matte Processing Bulk Loading Facility

Operator Ray Kennedy at the control console of matte processing's bulk loading facility. Product weight is both displayed and printed out on a tape. The conveyors are enclosed and vented to a dust collector to ensure good environmental conditions.

Changing times and rapid advances in technology are more than evident in today's society, and the mineral industry is particularly affected by such modernization. A specific example can now be found in the shipping section of Inco's matte processing department, strategically located in the Copper Cliff smelter complex.

The matte processing plant is designed to progressively turn converter matte into material that's either ready for market or is suitable for further treatment at various of the company's refineries.

A portion of the nickel oxide feed stock produced in the plant's fluid bed roaster building is shipped to the Clydach refinery for processing to nickel pellets and powders by the carbonyl process. Historically, this feed stock has been barreled and shipped by rail or transport to dockside where it was loaded into cargo holds and shipped to the Port of Swansea in Wales.

However, during the early 1970's, an increasing number of shipping companies phased out their conventional break-bulk carriers and began converting to vessels capable of transporting containers. At the same time, large container-handling facilities were erected at ports such as Halifax, St. John, and Montreal. All this was due to the realization that containerization of products would not only offer greater security, but would also decrease loading and unloading time at dockside, while resulting in lowered costs.

In keeping with the times, new facilities were commissioned and completed in mid-1975 at both the Copper Cliff matte processing department and at the Clydach refinery, for the bulk-loading and receipt of nickel oxide in containers. These facilities have eliminated the need for barreling and have resulted in significant cost savings in regards to both barrels and freight.

In the shipping section of the matte processing plant, the nickel oxide product is conveyed from storage bins to two charge bins, each capable of accommodating 20 tons. The charge bins are suspended on load cells which electronically signal the product weight to a control console. The system is completely automated, and the weighing

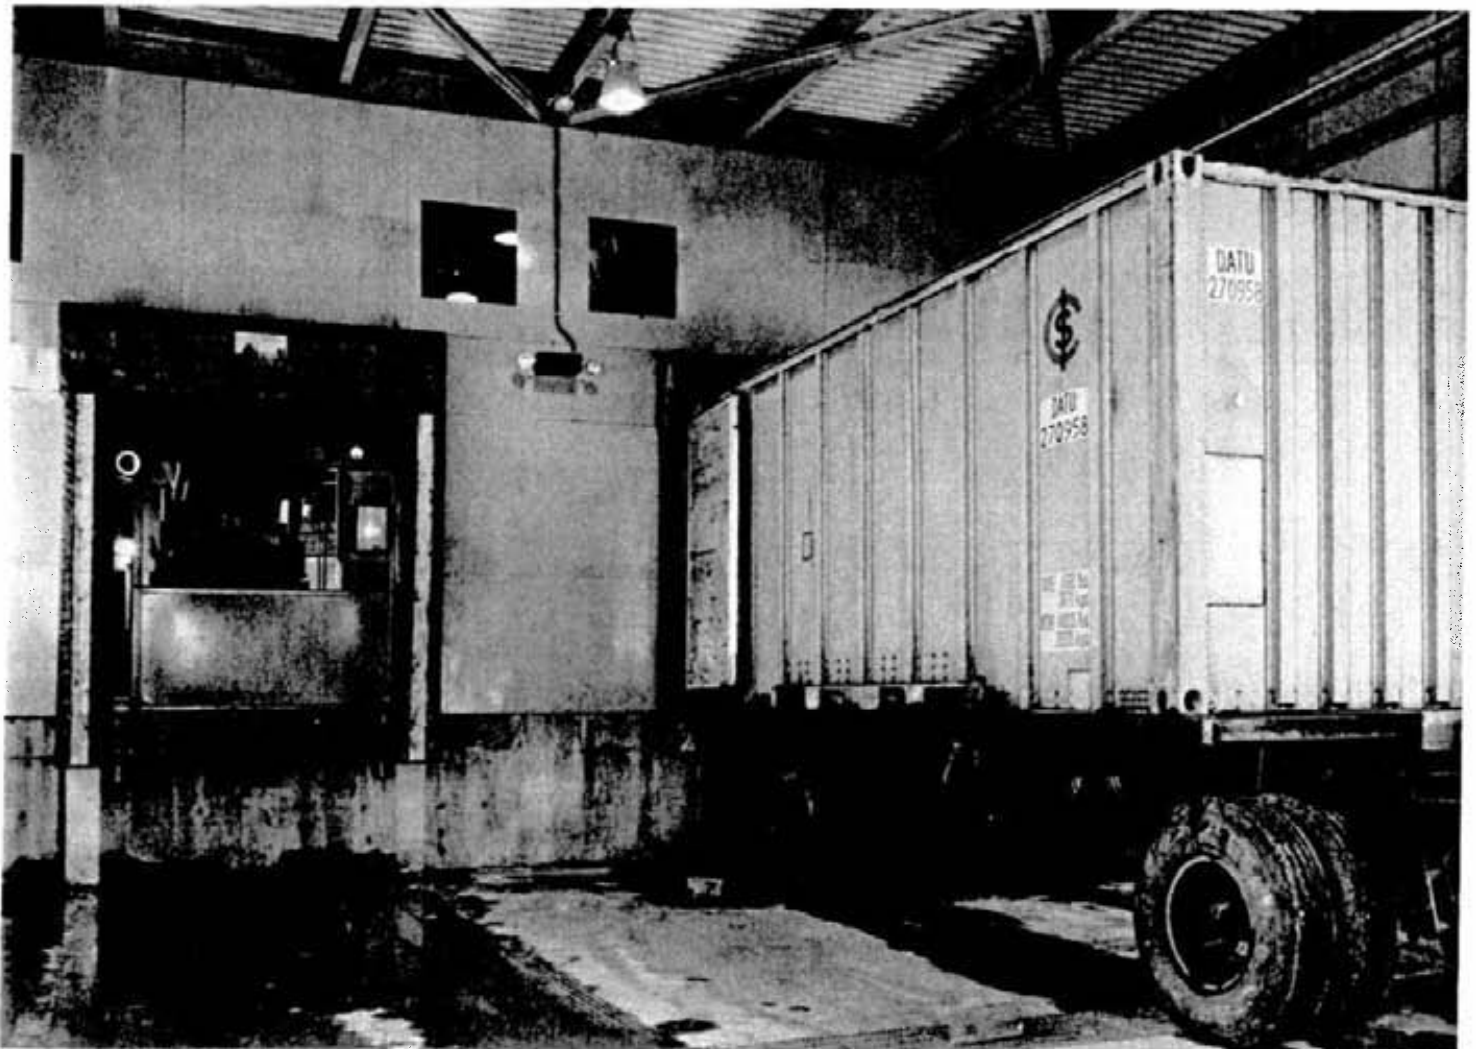

accuracy is plus or minus 0.1 per cent, or 40 pounds in 40,000.

When the charge bins have been filled to the required weight, they automatically discharge to two retractable conveyors which transfer the nickel oxide to the containers. Before the containers are loaded, they're first fitted with a water-proof liner; afterwards, the load is covered

with polyethylene to further protect from water. With these new facilities, two containers comprising one truck-tractor load can be loaded in an hour's time.

In addition to nickel oxide feed for Clydach, market Nickel Oxide Sinter 75 and Incomet are also similarly prepared for shipment to various European customers who prefer bulk shipments.

A 20-foot-long by eight-foot-wide by eight-foot-high container in position at one of the two loading docks in the shipping section of the matte processing plant. The end of the retractable conveyor can be seen at the empty dock. Note the metric gross weight of 20,320 kilograms, marked on the container!

Arthur the Otter has almost tripled his length in less than a year, and now weighs close to 10 pounds.

He rolls about in the leaves, squirming happily under playful hands, then chases about your heels, nipping and barking as he abandons himself totally to the game; he heads for the water, plunges in, and surfaces with a stick he manages to tug ashore. He shakes the water from his coat, then looks around expectantly, waiting for a reward either in the form of attention or a morsel of his favorite dog food.

The only problem is, he's not a dog — he's an otter who seems to think he's a dog!

Arthur the Otter was found abandoned last summer on the shores of Lake Nepewassi, and was officially adopted by longtime resident, Ernie Ashik.

Ernie retired from Garson mine as mine foreman in 1976 and had been with the company since 1941. He now lives year 'round in the home he built on the lake and is enjoying the company of Arthur to the fullest.

"It's just a circus to watch him," smiled Ernie. "I guess baby bears come close to being as active, but this little guy just loves to play. The neighbors around the lake all know about him, and they stop by to see him and to bring him some food."

"Eat? I guess so! He loves dog and cat food, and can go through a whole can a day. He catches his own minnows and perch, clams, crawfish, frogs and waterbugs; he gets 'em so slick it's not even funny. And he likes beef, but it's got to be cooked, while he prefers his fish raw."

"The odd time, I have to give him a little lickin' when he gets out of hand, and that's when you find out that otters are

just like skunks; they give off an awful scent for self-protection and boy, you've got to change your clothes real fast!"

Ernie added that he gets a lot of company because of Arthur, including his brothers — Wes, who retired from Garson mine early this year; Eric, who retired from Copper Cliff North mine in 1975; Weldon, a machinist with the Copper Cliff machine shop, and Ray, a stope leader at Garson mine.

An avid gardener, Ernie is known for his 10½-foot sunflowers and is becoming quite proficient at making his own ice cream and maple syrup; he also keeps busy buying and selling antiques, and

Guess Who's Coming to Dinner?

Arthur surfaced with the stick Ernie's holding, and looks for a handout.

does quite a bit of auctioneering, particularly for charity.

You just can't ask a man like Ernie what he does in his spare time . . . he simply doesn't have any.

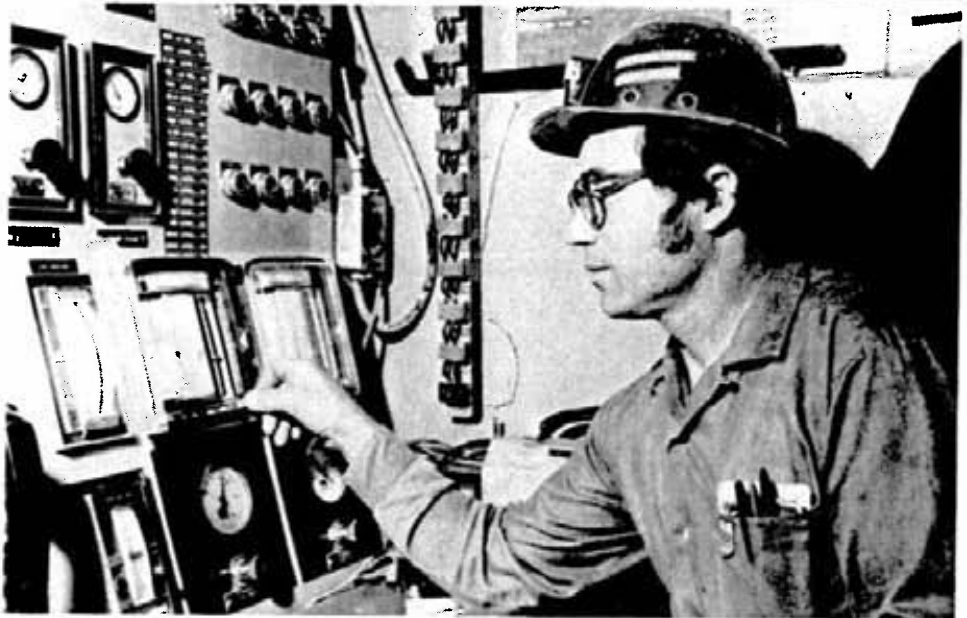

As tame as a housebound puppy and twice as playful, Arthur the Otter poses here with "foster parent", Ernie Ashik.

NEWSMAKERS . . . NEWSMAKERS . . . NEWSMAKERS . . .

The Port Colborne District Council of the Boy Scouts of Canada sponsored a blood donors clinic at the Inco Recreation Hall recently. Sealing and labelling the plastic sacs of blood are, from left, **Mrs. McCutcheon** of the Red Cross staff, from Hamilton, volunteer **Mrs. Jack Rivers** and venturers **Jamie Dickinson** and **Russell McCutcheon**. Over 250 pints of blood were collected.

A very important aspect of any underground mining operation is the practise of filling mined-out sections; this is accomplished by means of sandfill plants, located at numerous Inco mining operations. The use of hydraulic sandfill was first introduced at Inco in 1948, and refinements over the years have led to the current method which utilizes cement to stabilize the sand. Above, at Garson mine, sandplant operator **Gilbert Prevost**, regulates the feed rate for the sandplant's mixing tank by setting automatic controls on a special console. Below, loads from the Garson sandpit are hauled to the sandplant by 25-ton trucks, then dumped into a bin which is fitted with a vibrating screen at the bottom.

Appointments and Re-Assignments

Frank Boniakowski, project leader, Copper Cliff smelter.

William Dalyk, protection supervisor, safety and plant protection, Copper Cliff.

Marvin Degazio, capital expenditure clerk, division comptroller's office, Copper Cliff.

Marilyn Guenette, secretary, Copper Cliff smelter.

L.G. Guglielmin, general superintendent, Port Colborne research stations.

Michael Head, manager, process development, Toronto office.

Ron Hewitt, warehouse foreman, divisional shops, Copper Cliff.

Nina Kuula, secretary, field exploration, Copper Cliff.

Robert Lacelle, maintenance foreman, Levack mine.

Kenneth Lye, mill foreman, Copper Cliff mill.

Robert Reyburn, general foreman, Copper Cliff smelter.

Gerald St. Louis, general foreman safety, Levack mine.

Lawrence Tarini, first-aid attendant, safety and plant protection, Copper Cliff.

Peter Todd, maintenance superintendent 'B', Copper Cliff nickel refinery.

Wayne Tonelli, plant protection officer, safety and plant protection, Copper Cliff.

George Watson, supervising buyer, purchasing and warehousing, Copper Cliff.

Well over 100 members of the maintenance department, mining and milling, will be busy during the summer shutdown, carrying out major repairs and overhauls not usually performed under production conditions. Above from left, **Norm Miles**, superintendent of maintenance, **Dar Anderson**, manager of maintenance, and **Largo Albert**, senior hoisting specialist, review the extensive maintenance work scheduled to be carried out during the shutdown. Aside from the regular inspection of pumps, fans and hoisting equipment, major air compressor overhauls are slated at Copper Cliff South and Frood mines; head sheaves will be replaced on the Creighton No. 5 shaft skip hoist. Also at Creighton No. 5 mine, rope grooves on the drum of the skip hoist will be machined. The replacement of tippie bin liners is scheduled at the Clarabelle mill.

* * *

Tom Peters, centre, head of Inco's agriculture department in Copper Cliff, recently told a gathering of the Copper Cliff Rod and Gun Club that his department will be planting in excess of 10,000 trees, mostly jackpines, throughout Inco's Wildlife Management Area in Copper Cliff this summer. He also discussed the company's ongoing research into the adaptability of water fowl throughout the wildlife area. Above, members of the Copper Cliff Rod and Gun Club look over conservation-oriented crests which are for sale to help raise funds and advertise the club. From left, **Stan Racicot**, secretary, **Dave Hamilton**, president, Inco's **Tom Peters**, **Richard Berard**, 2nd vice-president, and **Buster Powell**, treasurer.

Logo Writer

Erminio Cozzarini

Our logo writer this month is Erminio Cozzarini, a sandfill pipefitter with the Creighton complex sandfill department. Born in Northern Italy, Erminio came to Canada in 1951 and headed straight for the Sudbury area and Inco; he was hired on as a process laborer at Creighton mine, and has been there ever since. Erminio's fulltime hobby is teenagers. Since 1961, he's dedicated himself to providing youngsters with a purpose in life, a sense of values. He works with teenagers as supervisor at the Inco Club in Creighton, and he founded the St. Michael's Youth Choir, of which he has been choir director of since 1963. And for over a dozen years, he's arranged for the choir to take an annual trip, simply for recreation and a feeling of togetherness. This summer, the choir will head for Niagara Falls. According to Erminio, his goal is to "keep kids off the streets and give them incentives." Erminio and his wife Tina have three daughters and a son, and make their home in Creighton.

To attain greater efficiency, first-class maintenance mechanic **David Mazarolle** narrows the chute on the dust control system in the crushing plant at the Frood-Stobie mill.

NEWSMAKERS . . . NEWSMAKERS . . . NEWSMAKERS . . .

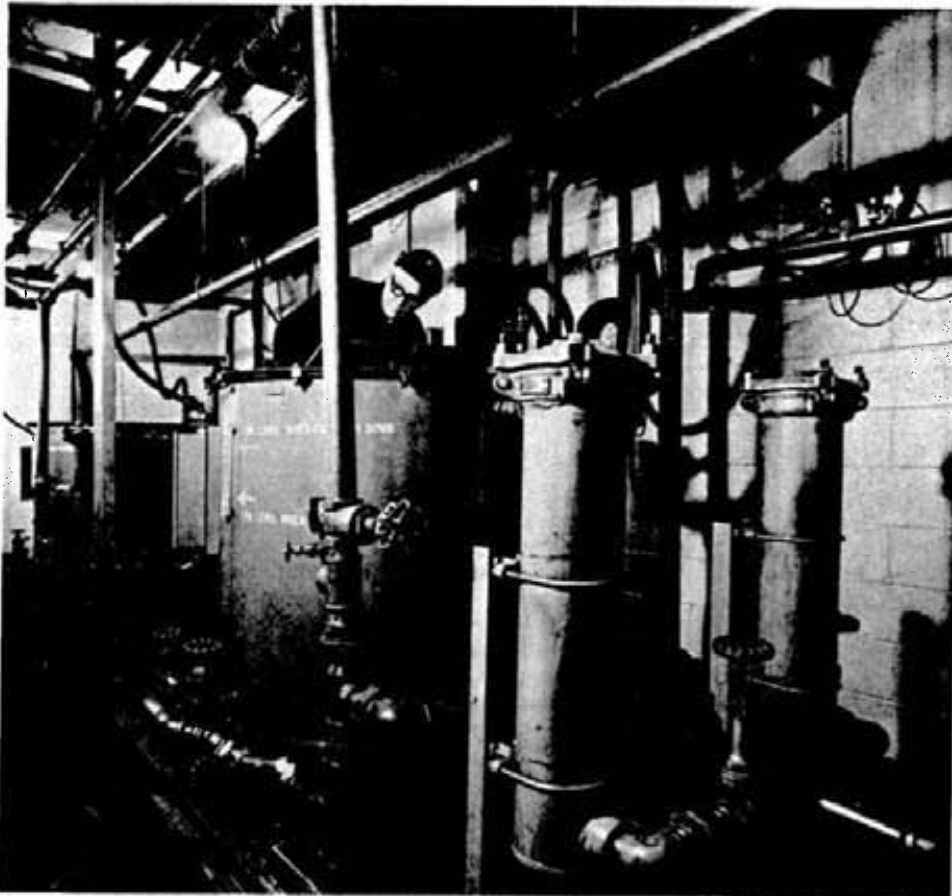

Some of the photos used in producing catalogue sheets distributed by the New York office to all Inco sales representatives are taken at the Port Colborne nickel refinery. Here painter **Bill Pruder** touches up some scratches on a drum of Utility Nickel Shot and Pig, produced at the Port Colborne nickel refinery, have enjoyed quick and positive acceptance in the nickel marketplaces of the world.

That's **John McCreedy**, centre, chairman and chief executive officer of Inco Metals Company, in conversation with **Gordon Tapp**, left, executive director of the Canadian Institute of Mining and Metallurgy, and **Gordon Skilling**, secretary-treasurer, CIM. The photograph was taken during the 80th Annual General Meeting of the CIM, held in Vancouver from April 23 to 27. Over 3,000 CIM members turned out for this year's gathering, the largest on record. Inco Metals Company was well represented throughout the technical sessions. One of the papers, "Inco Metals Reclamation Program" by **Tom Peters**, head of the Ontario Division's agriculture department, drew a wide response. The well-documented presentation dealt with Inco practices used to grow vegetation on stressed areas and the revegetation of the tailings area in Copper Cliff and its gradual transformation into a Wildlife Management Area.

This is Inco Metals Company's new **Divisional Shops Complex** in Copper Cliff. The new complex will include a modern machine shop, a component repair centre for mobile underground equipment, a motor winding shop, and a warehouse. The new \$13 million facility is scheduled for completion in the very near future.

Edward Whaley, second-class maintenance mechanic, takes great pride in keeping things spic 'n' span, as evidenced by the spotless condition of this oil room in the crushing plant of the Froid-Stobie mill. Here, Ed checks the oil level in the No. 3 shorthead crusher tank.

Sudbury will host the 12th Canadian Rock Mechanics Symposium May 23 to 25 when over 100 representatives from mining companies from across the globe will discuss "Mining with Backfill." Inco Metals Company will be represented by **Claudio Barsotti**, assistant to the chief mines engineer. His technical paper will deal with "The Evolution of Fill Systems at Inco mines in Sudbury". Above, Barsotti, left, reviews his paper with **Merv Dickhout**, centre, chief mines engineer, and **Phil Oliver**, supervisor of rock mechanics, Inco Metals Company, Ontario Division.

Member artists of the Onaping Falls Art Club recently displayed their various crafts during the club's annual spring art exhibition at the Onaping Community Centre. Club publicity director **Debbie Graham**, whose dad Stuart is at Levack mine, mentioned that over 80 pieces of work were hung for the occasion, including oils, sketches, prints and embroidered wall panels. Also featured were ceramics, heritage knitting, macrame, and wood sculptures. Above, **Verna Cusson**, left, of Azilda, and **Daisy Suter**, of Levack, discuss the merits of wood carvings and ceramic figurines while, below, **Gale Russel**, left, Sudbury, and **Mary Jowsey**, of Copper Cliff, view a hand-knotted rug-wall-hanging, prepared by Mary, whose husband, **Milt**, is assistant to the vice-president, mining and milling, in Copper Cliff.

Inco Tours

Inco's public tour season in Copper Cliff will commence on Monday, May 8, and will run through Saturday, July 15. Tours will be resumed on Monday, August 28 and end Saturday, September 2. Public tours will be offered on a continuous basis from 9:00 a.m. to 2:30 p.m. every day except Sunday.

Tour headquarters and commencement point will be the Copper Cliff Curling Club. Tours will consist of visits to the Copper Cliff South mine hoistroom, the Clarabelle mill and the converter aisle.

NEWSMAKERS . . . NEWSMAKERS . . . NEWSMAKERS . . .

At the recent 80th annual meeting of the Canadian Institute of Mining and Metallurgy, held in Vancouver, **Peter Venus**, left, mine engineer at Levack mine, and **Thomas D. Parris**, Ontario Division vice-president, responsible for mining and milling, go over the final draft of Inco's paper on "Large underground blasts using slurry explosives". The paper, co-authored by Peter Venus and **George Johnston**, area engineer at Frood-Stobie mine, drew a wide response from attending delegates.

Noted local artist **Frank Homer**, supervisor of benefits with the company's employment and benefits department, chats with **Marguerite Feick**, wife of Inco's **Bud Feick**, executive assistant to the vice-president, smelting and refining, during a recent art exhibition at Rothmans of Pall Mall. The three-week exhibition, titled "Our Ontario", drew capacity crowds and featured 16 of Frank's watercolors depicting various northern scenes.

Raymond F. Decker

Raymond F. Decker, formerly vice-president, research and development, The International Nickel Company, Inc., was recently elected a vice-president of the parent company, Inco Limited. In his new position, Dr. Decker is responsible for corporate technology and diver-

sification ventures.

Dr. Decker joined Inco in 1958 as a research metallurgist. He became assistant to the manager of the Inco Research and Development Center, Sterling Forest, N.Y., in 1967 and assistant manager in 1969. He was director of research and development of The International Nickel Company, Inc., Inco's marketing subsidiary in the United States from 1973 to 1975, when he became vice-president.

A co-inventor of maraging steel, Dr. Decker received the Sesquicentennial Award of the University of Michigan in 1967 and the Robert Mehl Gold Medal as the 1973 IMD lecturer of the American Institute of Mining, Metallurgical and Petroleum Engineers. He holds numerous patents and is the author of many technical articles on steels and superalloys.

Allen Patterson, left, a pillar leader at Creighton mine and chairman of the effective speaking contest, sponsored yearly by the Lively-Creighton Lions Club, recently presented individual \$75 cheques to the winners in the boys' and girls' divisions. **Mary-Ellen Hickey**, daughter of **Joseph Hickey**, supervisor of Inco's stationery department in Copper Cliff, and **Roydon Lloyd**, son of **James Lloyd**, an inspector with the department of consumer affairs, were the lucky first-prize winners. According to Allen, grade 9 to 13 students from the entire Walden area were invited to participate in this year's event.

A capacity crowd gathered at the Italian Club in Copper Cliff recently to honor **Jo Walmesley's** retirement after 30 years with the company. Friends, business acquaintances, and company suppliers alike paid tribute to the well-known general office receptionist, who was presented with a piece of luggage, a Royal Doulton figurine, and, from former ball teammates, a swiveling softball mounted on a piece of polished ore. Pictured with Jo are **Charlie Hews**, left, recently appointed president of the Manitoba Division, and pensioner **Alex Godfrey**, right, who, with over 51 years' service, has one of the longest service records in the company's history. Also on hand with their respective wives were **Dr. Walter Curlook**, senior vice-president, Inco Metals Company, Toronto; **Ron Taylor**, recently-elected assistant to the president, Inco Metals Company, with special responsibility for planning; and **Gordon Machum**, vice-president, smelting and refining, Ontario Division. The occasion was highlighted by the attendance of Jo's sister **Ethel**, who arrived from Arizona and had previously held Jo's position with the company.

* * *

The Caruso Club in Sudbury recently hosted the annual retirement party of the Copper Cliff Mines Association and welcomed a capacity crowd to the cocktail hour, roast beef dinner, presentations, and entertainment. Honored guests of "the class of '78" are, back row, from left, **Ted Lachance**, **Paul Poulin**, **Doug Dinnes**, **Des Keaney**, **Jack Serpell**, **Mike Opaleychuk**, **Ed Shalla**, **Ed Laurin**, **Almo Maki**, **Otto Dudas**, **Don O'Bonsawin**, **Lyle Parks**, and **Aldo Tonelli**. Front row, from left, **Roy Cook**, **Albert Wierzbickie**, **Omer Hagen**, **Ed Turcotte**, **Albert Wickie**, **Jack Theodos**, **Martin Villemere**, **Albert Ouellet** and **Tom Zaltz**. Members of the Copper Cliff Mines Association are reminded to attend the upcoming annual picnic on June 11, starting at 1:00 p.m., at the Richard Lake Ukrainian National Federation Camp.

A visit to the Sudbury Boxing Club indicates that Inco is well-represented in local boxing circles. Above, trainer **Mike Rosko**, right, explains the importance of a well-aimed "left hook", to club members, from left, **David Jamrozik**, **Arvo Punkkinen**, and **Walter Neville**. Below, regular workouts keep the boxers in shape. Walter Neville, left, a fitter-general at Frood mine, weighs in at 139 pounds, has taken the Ontario Championship three times, and was the East Canadian champion in 1975. David Jamrozik, centre, is a six-time Ontario champion and a two-time Canadian runner-up. His dad, Frank, has 26 years with the company, and is now at Frood mine. At 147 pounds, Arvo Punkkinen, right, is a welter-weight; he was Canadian champion in 1975, and is the 1978 Ontario champion. Dad, Alpo, is a first-class maintenance mechanic at Frood-Stobie mill.

Meet "The Machine"! **George Talbot**, a storeman in the Copper Cliff warehouse extension, has been so nicknamed by fellow bowlers for his incredible talent on the lanes. George is the only person in Sudbury to bowl over 700 in a three-game series, and has so far achieved this feat three times this year. His high single game is 290, and he holds an award-winning 202 composite average. "The Machine" has been with the company for 14 years now, and is just as skilful on the job as on the alleys.

Inco Golf Tourney Slated for June 24

This year's annual **Inco Tournament** will be held on Saturday, June 24, at the Idylwyld Golf and Country Club. The entry fee has been set at \$10 and will cover green fees, lunch and prizes.

Two draws will be held, both with shotgun starts. The morning draw will tee off at 7:15 a.m., and the afternoon draw will get underway at 1:00 p.m. The maximum number of participants has been established at 256 to accommodate as many participants as possible. Pensioners are welcome.

Lunch will be served on completion of the morning draw, while the afternoon draw will dine on completion of their round.

The prize structure for this year's tournament has been changed: prizes will be awarded to the best eight low individual gross scores and the best 20 low individual net scores.

In addition to the regular event winners, the four low gross players for the day will compete in the President's Trophy Tournament in competition with teams from Thompson, Manitoba, Port Colborne and Toronto. The event will be played in Toronto this year.

At the 1900 level of Creighton No. 3 shaft, members of the Creighton mine sandfill department are currently involved in the installation of a 12-inch internal-diameter water column pipeline which will be used to pump mine return water from the 1900 level sumps to surface. The pipes average 18 feet in length and weigh close to a ton apiece. Here, an intricate make-up piece is being positioned to fit on a curve; the piece was designed by the Creighton engineering department and made to specifications by the Creighton No. 3 shaft plate shop. Under the watchful eye of Creighton mine foreman **Wally Neven**, left, the special piece of pipe is maneuvered into place by sandfill crew members, from left, **Albert Leguerier**, **Camille Leblanc**, **Chris Hallakinen** and **Erminio Cozzarini**.

The Walden Bantams wound up their season by capturing first-place honors in the Nickel District N.O.H.A. league. The team also won the local Bantam "A" silver stick competition, the "C" Division Georgetown tournament and the Northern Ontario Bantam "A" championship. Overall record was 50 wins, 6 losses and 4 ties. Front row, from left, are **Calvin Maki**, **Ian Parry**, **Ron Miller**, **Mike Zyma**, captain, **Dan Longe**, cited as the most valuable goaltender in the Georgetown tournament, **Gord Davies**, and **Ron Chenier**. Back row, from left, **George Morbin**, manager, **Scott Rodda**, **John Mayer**, **Robin White**, **Robert Mackevicius**, **Barry Walsh**, **Scott Pearson**, **Dave Duncan**, **Terry Nootchtal**, **Maurie Desjardins**, **Carl Nootchtal**, **Jim Mayer**, trainer, and **Teo Pearson**, coach.

NEWSMAKERS . . . NEWSMAKERS . . . NEWSMAKERS . .

A new truck route now provides alternate access to the Copper Cliff smelter complex, thus relieving congestion at the smelter's main gate. **Omer Bellmore**, transportation safety foreman with the transportation and traffic department, demonstrates the operation of the newly-opened remote-control gate located just off Benjafield Road. Typically, a trucker enters a specially-equipped booth and phones security at the main gate. He places his pass in a special slot, and cameras pick up the pass and his identity, while another camera monitors the truck. Once the information is received and checked at the main gate, security personnel provide access.

That's **Angelo Colosimo**, a feed tender in the Copper Cliff roasters, at the controls of his motorhome. What used to be an old breadtruck in Toronto a few years ago is now a modern motorhome, equipped with three beds, a washroom, a three-way fridge, a range, and hot and cold running water. According to Angelo, it took him and his family three months to complete the project. Any travel plans in Angelo's future? The Colosimo's will be touring Thunder Bay and Niagara Falls during the summer shutdown.

The company's transportation and traffic department, located in the Copper Cliff smelter complex, is responsible for the many locomotives in use throughout Inco's various operations. At left, locomotive engineer **Romeo Venne** opens a headlight to clean a reflector and the inside of the glass cover. At right, locomotive engineer **Paul Bidal** polishes a new type of lamp recently installed on loco No. 116. The improved beam allows the locomotive engineer to dim or brighten the light as necessary.

NEWSMAKERS . . . NEWSMAKERS . . . NEWSMAKERS . . .

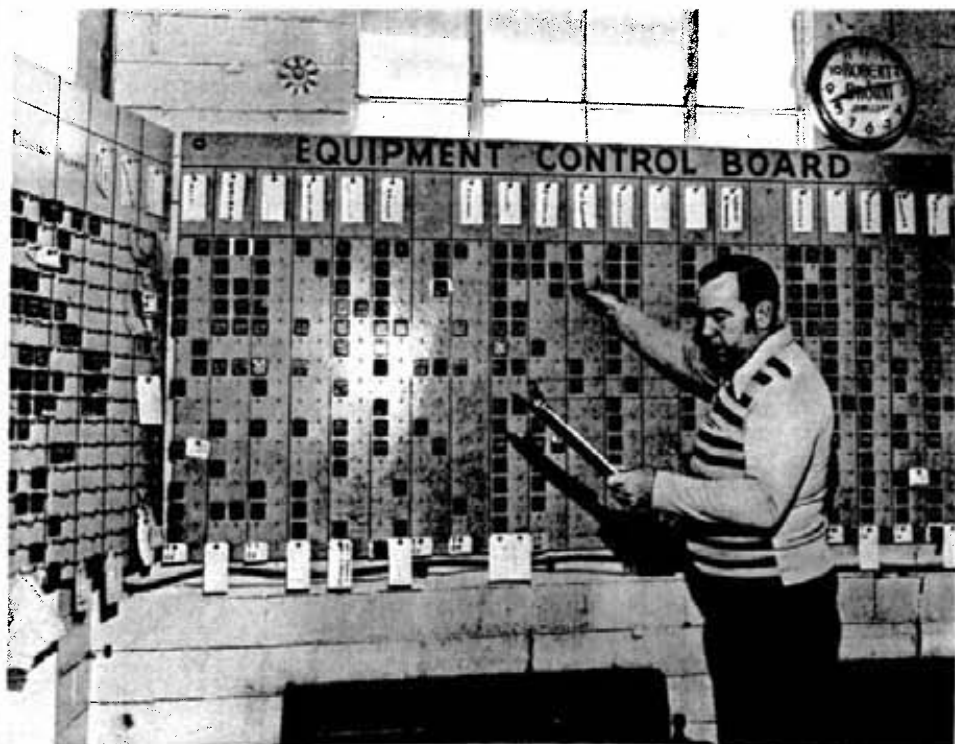

These smiling fellows are members of the Creighton complex sandfill crew, and they have good reason to be proud — they've just completed a full year on the **Wally Neven** shift without an injury of any kind, not even a minor dressing. Said Wally Neven, Creighton mine foreman, "It's the first time I've been involved in an achievement like this, and I'm really pleased. But we only attained this safety record through good understanding between the men, and complete co-operation in trying to achieve a similar goal." From left are **Charlie Baunach, John Mynerich, Andy Kalpainen, Udo Kanthak, Stan Lorenc, Eddie Mayer, Andy Steele, Ugo Flora, "Snug" Mynerich, Joe See, Don Neva,** and Creighton mine foreman **Wally Neven**.

A capacity crowd was on hand for the April meeting of the Sudbury Branch, CIM, when **Charles Ferguson**, right, director of environmental affairs, Inco Metals Company, informed the gathering of Inco's waste-water recycling and treatment strategy at its operations in the Sudbury District. Following his most informative address, the guest speaker here discusses matters of mutual interest with **Jack Noonan**, manager of environmental control, Copper Cliff.

* * *

Inco Metals Company's construction depot, located at Murray mine, is home for the many different tools and pieces of rental equipment required by the construction group. Here tools and equipment co-ordinator **Ray Bidal** locates the various tools that are out on the job with construction group foremen. The equipment control board keeps track of machinery and tools assigned to specific jobs.

Inco's waste water treatment plant in Copper Cliff has been fully operational for two years and is designed to treat 60 million gallons per day. Here is a partial view of one of the two 135-foot-diameter clarifiers. The white three-inch-thick styrofoam slabs installed around the launder serve the purpose of preventing ice bridging damages and, according to **Ed Nevala**, supervisor of operations, sewage and water, central utilities department, the styrofoam innovation outperforms the original design of an air-bubbling system.

INCOmetrics

USING SI

Last month when discussing the change to SI we observed that none of the common electrical units will change and that the familiar time and angular units will continue to be used.

Of the remaining SI units, most are no longer complete strangers to us. For many years we have been making 35 millimetre color slides; we observed the Olympic games and other sports events which used metric measurements. We are seeing more and more items in metric-size packages. We also hear weather reports and see highway speed and distance signs in metric units. All this is giving us a feel for the size of units in which we are interested.

It is not necessary to learn everything about all units. Most of us only need to be quite familiar with one or two units and to have a few reference points for two or three others.

Most people will need to be quite familiar with units of length. Soon every home will have metric tape measures so we may accurately measure millimetres, centimetres and metres.

In the meantime, a metre is a little longer than a yard, a millimetre which is one-thousandth of a metre is about the thickness of a dime. A centimetre is equal to ten millimetres.

We will soon learn from usage which units of length will be used for different purposes but in general the metre is used for large measurements such as the overall dimensions of a building or the property on which it is located. Centimetres will be used mainly for measurements of such items as clothing, fabric, and personal measurements of height, waist or chest size. Millimetres will be used very extensively in sizes of building products, dimensions in buildings and measurements of machines. It may seem odd that a sheet of plywood will be referred to as 1200 by 2400 millimetres or that a wall is 14 400 millimetres long, but remember that due to the convenience of this decimal system it is only necessary to divide by 1000 to read the measurements in metres. Thus, the plywood is 1.2 by 2.4 metres and the wall is 14.4 metres long.

The kilometre which is one thousand metres is generally used where we would previously have used miles.

The most common unit of area is the square metre which is a little larger than a square yard. The hectare is a convenience unit equal to 10 000 square metres and is primarily used for medium sized land areas. The square kilometre is used for very large areas.

The cubic metre is the basic unit of volume and is somewhat larger than a cubic yard. The cubic metre is used for recording such things as quantities of gravel, volume of excavations and large volumes of water and gases.

The term "litre" is used for convenience in place of the equivalent "cubic decimetre" and the litre is one thousandth of a cubic metre or a little smaller than a quart. It is a convenient size of unit and will therefore, be used very extensively in domestic, commercial and also industrial applications. It is used particularly for fluid measurement but may also be used in such applications as capacity of an automobile trunk or for engine displacement. The millilitre which is one thousandth of a litre is widely used in cooking and also in packaging of drugs and cosmetics.

Most of us now are aware of enough reference points on the Celsius temperature scale. At zero degrees Celsius, water freezes, 20 degrees Celsius is a comfortable room temperature, 37 degrees is normal body temperature and water boils at 100 degrees Celsius.

A kilogram of mass is a little more than two pounds so if you were overweight at 220 pounds you are equally too heavy at 100 kilograms. You have probably noticed that many packages of breakfast cereals have a mass of about 450 grams which is close to a pound.

We used quite an assortment of pressure units such as pounds per square inch and inches of mercury but in SI all pressures will be expressed in pascals or multiples or sub-multiples of the pascal.

Kilopascal will be the most common and as you have noticed atmospheric pressures are about 101 kilopascals. You will be pumping up your car tires to the correct pressure specified, which will be around 200 kilopascals.

There are other units such as the newton which is the unit of force but unless you are an engineer or scientist you will not be using them.

As a matter of interest, all power, whether from electric, steam, internal combustion or nuclear sources will be measured and recorded in watts, kilowatts, etc. If you get a new car in a year or so, don't be surprised to find the engine rating in kilowatts rather than horsepower.
